

Passports and credit cards with the RFID micro-chip will look like this:

RFID micro-chips can be found in your passport, credit cards, bank cards and ID cards. Each chip emits radio transmissions which can be read and downloaded by thieves without you knowing by using a hand-held

Keep your passport safe from e-pickpockets and identity thieves with this lightweight passport protector! Both, tear resistant and water resistant, simply slide your passport into this lightweight RFID blocking sleeve and relax, knowing your information is safe.

Pacsafe's RFID passport and credit card protectors, use a special award-winning RFID-blocking material. The unique material blocks transmission and stops RFID readers from gaining access to your personal information and data.

RFID readers can be bought easily and cheaply online by absolutely anyone. Identity thieves use this hand-held device to tap into the radio transmissions and literally read the data on your passport or cards.

All the information on your passport including your name, date of birth, digital photograph, issue and expiry date as well as biographic information. On your cards they can access your account name, issue date, expiry date and account number.

Visit pacsafe.com for information.
